*We are always keen to use modern technology to access engineering talents remotely,” said Derek H. Burney, President and CEO of CAE. “Gone are the days when efficiency required everything done under one roof. We have been very successful at filling our engineering level positions at our Slemon Park facility.”*

*The company presently employs 95 people and have plans to increase that number to 140 in the near future. Bernd Kessler, a vice-president with the international company says the local workforce has gained an exemplary reputation at Honeywell because of its level of expertise and fast turnaround times. “Despite turbulence in the aerospace industry, following 9/11 and the SARS crisis, the plant in Slemon Park is on solid ground,” Kessler noted.*

*Training is a good investment,” said Mr. Rodger. “With Holland College Aerospace Centre next door, we know that our employees will receive the proper training needed to grow our business successfully. We are confident we will build a world-class team and business at our facility.”*
